The architecture of colour and light

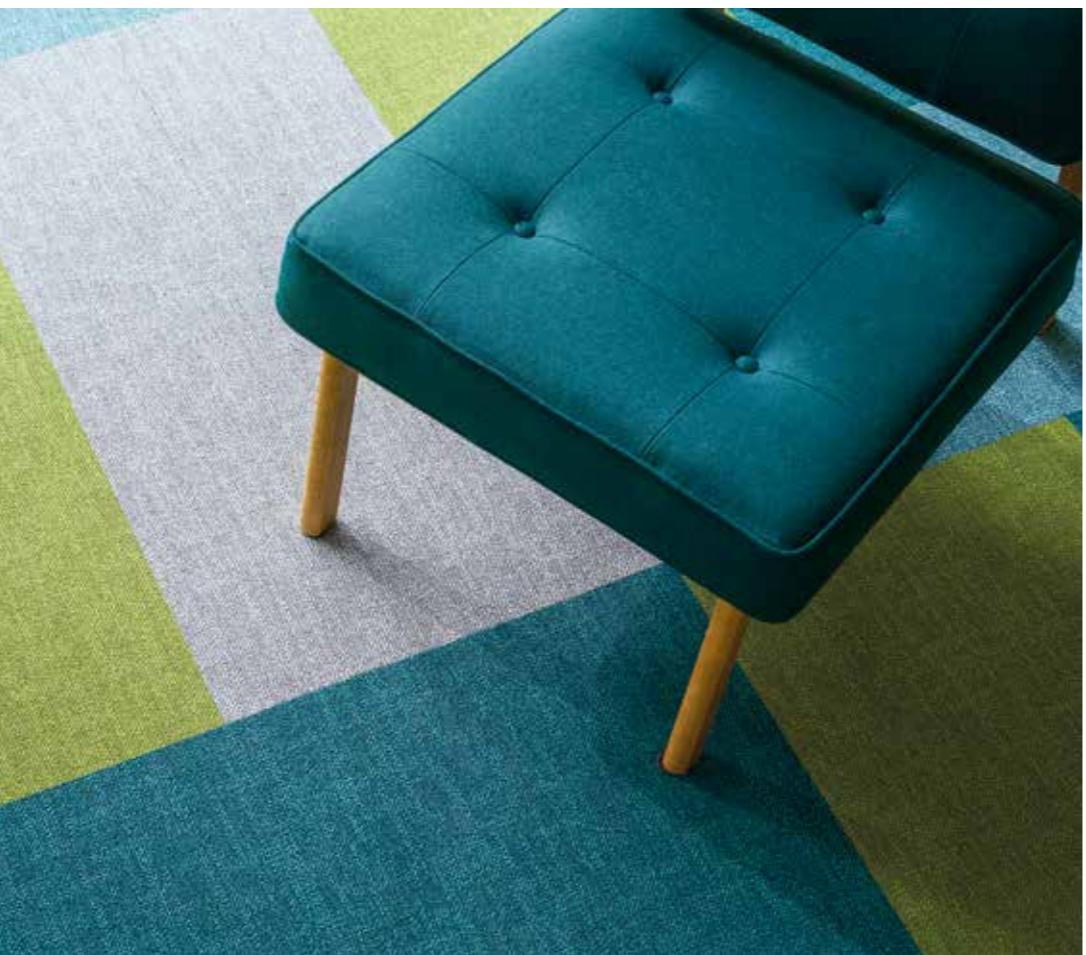

Colour and light are fundamental to our experience of architecture. Colour foundation brings the designer an essential and specially selected palette of colours to enhance today's

modern commercial interiors, through the interplay of light, colour and shape.

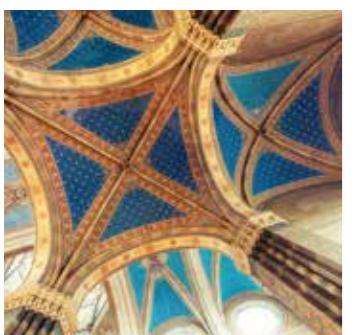

L'architecture de la couleur et de la lumière

Dans l'architecture, la couleur et la lumière sont des éléments fondamentaux. Colour foundation apporte au designer, une palette de couleurs indispensables et spécialement sélectionnées, permettant de rehausser l'intérieur des bureaux actuels, grâce à l'interaction entre la lumière, la couleur et la forme.

La arquitectura del color y de la luz

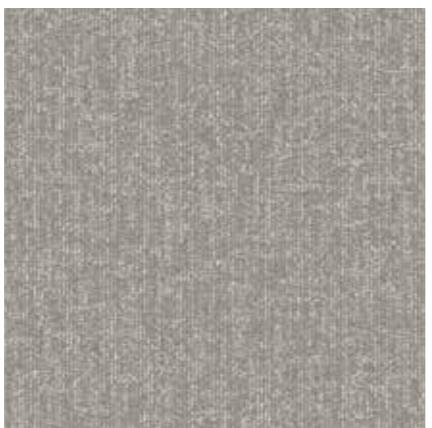

Color y luz es fundamental a nuestra experiencia de arquitectura. Colour foundation trae al diseñador una gama de colores esenciales y especialmente seleccionados para mejorar los interiores de las oficinas de hoy, por la interacción entre la luz, el color y la forma.

The subtle nuances of colour surround us and inspire us both outside and inside our buildings. With colour foundation's 24 colours, designers can choose and easily combine bright shades with neutral tones, to create subtle or eye-catching spaces.

De subtiles nuances de couleurs, issues des environnements extérieurs et intérieurs, nous entourent et nous inspirent. Grâce aux 24 couleurs que composent colour foundation, les designers peuvent facilement choisir et associer d'éclatantes nuances à des tons neutres pour créer à la fois, des espaces subtiles et attirants l'attention.

Los matices sutiles de color, de los interiores y exteriores, nos rodean y nos inspiran. Con los 24 colores de colour foundation, los diseñadores pueden fácilmente y combinar sombras brillantes con tonos neutros para crear tanto espacios sutiles como llamativo.

LRV table explained

Industry guidance and regulations highlight the need for certain surfaces and features to contrast visually with their surroundings. Provision to assist special needs, including the visually impaired, is critical in building interior.

The interplay of light and colour needs to be considered in this respect and Light Reflectance Value (LRV) testing is of importance to designers and building owners. Areas of particular interest which relate to flooring, and can be found in any building are:

- Wall to ceiling and wall to floor junctions;
- Exposed edges of sloping floors;
- Seating and its surroundings; and
- Stair nosings.

LRVs for colour square and colour rectangle are outlined in the table.

Les directives et réglementations de l'industrie soulignent la nécessité pour certaines surfaces et caractéristiques de contraster visuellement avec leur environnement. Des dispositifs visant à aider les personnes ayant des besoins particuliers, notamment les personnes ayant des déficiences visuelles, sont impératifs à l'intérieur des bâtiments. L'interaction de la lumière et de la couleur doit reposer en considération à cet égard. C'est pourquoi, les tests concernant la LRV (Light reflectance value / Valeur de réflexion de la lumière) sont importants pour les designers et propriétaires de bâtiments.

Les zones principalement concernées, liées aux revêtements de sol et se trouvant dans tout type de bâtiments sont:

- Les jonctions entre mur et plafond et entre mur et sol;
- Les rebords visibles et inclinés des sols;
- Les espaces avec places assises et leur environnement; et
- Les nez de marche

Les LRVs de "colour square" et "colour rectangle" sont listées dans le tableau ci-joint.

Directivas y regulaciones de la industria subrayan la necesidad para algunas superficies y características de contrastar visualmente con su entorno. Dispositivos para ayudar a personas que tienen necesidades particulares, especialmente a las que tienen deficiencias visuales, son imperativos dentro de los edificios.

La interacción entre la luz, el color debe ser tenida en cuenta a esta respecto. Las pruebas de la LRV (Light reflectance value / Valor de reflectancia de Luz) son importantes para los diseñadores y propietarios de los edificios.

Las zonas de interés que se relacionan con el suelo y que se encuentran en cualquier edificio son:

- Las conexiones entre pared a techo y pared a suelo;
- Los bordes visibles y inclinados de los suelos;
- Espacios con asientos y su entorno;
- Los bordes exteriores del peldaño.

En el cuadro adjunto se indican las LRV de "colour square" y "colour rectangle".
